No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Lol pV, is a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gill library. Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                         Gaps
                                                           The present peptide is a human antigenic determinant contg. peptide, compprising residues 129-148 of the recombinant Kentucky Blue Grass pollen allergen rKBG60, which is from the Poa p IX 9P. of grass pollen allergens. A compsn. comprising the peptide and a carrier can be used to desensitise allergic individuals, and prevent allergic Individuals from developing an allergic reaction to grass pollen. The compsn. may also be used to deplete allergen specific antibody producing cells. The peptide can be used to diagnose grass pollen allergy, and has the following human immunological response profile, B-cell (hIgG (-)/hIgE (-)), T-cell (-).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Lolium perenne Lol pV and Dactylis glomerata Dac gV epitope(s) and DNA - for treating sensitivity to rye-grass pollen allergen or an immunologically cross-reactive allergen.
used to desensitise allergic individuals, prevent grass pollen allergy and deplete allergen-specific antibodies

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Lol pV, is a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprissing at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

```
LOI PV, 1S a major allergen of ryegrass pollen, and is encoded by the CDNA sequence of clone 12R (AAQ85932), a full-length clone derived from a lambda gtll library. Peptides (AAR71508-61) comprising at least one real epitope derived from the Lol pv protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pv, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide including at least 1 human antigenic determinant of Kentucky
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present peptide is a human antigenic determinant contg. peptide, comprising residues 109-128 of the recombinant Kentucky Blue Grass pollen allergen rKBG60, which is from the Poa p IX gp. of grass pollen allergens. A compsn. comprising the peptide and a carrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Blue Grass allergen - from Poa p IX gp. of grass pollen allergens, used to desensitise allergic individuals, prevent grass pollen allergy and deplete allergen-specific antibodies

Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pV protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pV, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Peptides (AAR71508-61) comprising at least one T cell epitope derived from the Lol pv protein are claimed, and can be used to treat or diagnose sensitivity to ryegrass pollen in an individual or to pollen proteins that are immunologically related to Lol pv, such as Dac gV (see AAR71507).
                                                                                                                                                                                                                                   Gaps
can be used to desensitise allergic individuals, and prevent allergic individuals from developing an allergic reaction to grass pollen. The compsn. may also be used to deplete allergen specific antibodies from an individual, and anergise allergen specific antibody producing cells. The peptide can be used to diagnose pollen allergy, and has the following human immunological response profile, B-cell (hIgG (-)/hIgE (-)), T-cell (+).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Lolium perenne Lol pV and Dactylis glomerata Dac gV epitope(s) and DNA - for treating sensitivity to rye-grass pollen allergen or an immunologically cross-reactive allergen.

Peptide including at least 1 human antigenic determinant of Kentucky Blue Grass allergen - from Poa p IX gp. of grass pollen allergens, used to desensitise allergic individuals, prevent grass pollen allergy and depter ellergen-specific antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                  The present peptide is a human antigenic determinant contg. peptide, comprising residues 99-118 of the recombinant Kentucky Blue Grass pollen allergen rKBGGO, which is from the Poa p IX qp. of grass pollen allergens. A compos. comprising the peptide and a carrier can be used to desensitise allergic individuals, and prevent allergic individuals from developing an allergic reaction to grass pollen. The compsn. may also be used to deplete allergen specific antibody producing cells. The peptide can be used to diagnose grass poilen allergy, and has the following human immunological response profile, B-cell (hIGG (-)/hIGE (+)), T-cell (+).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

AAW76449-W76534 are peptide fragments of a natural pollen allergen, Phl p 5b, isolated from Graminae species. This allergen can be modified and the reactivity of the modified allergens with IgE antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained. The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pollen; allergen; Phl p 5b; IgE; antibody; grass; reactivity; T cell; epitope; immunotherapy; allergy; hyposensitisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modified recombinant allergens - useful for immuno-therapy of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene

                                                                  phl p 5b, isolated from Graminas species. This allergen can be modified and the reactivity of the modified allergens with IgE antibodies to grass pollen allergens is reduced or eliminated while their reactivity with T cells is retained The genes for the allergens are modified so that the encoded polypeptides have one or more amino acid substitutions, deletions and/or additions. The dominant T-cell epitopes of the allergens are not genetically altered. Such allergens have applications in the immunotherapy of allergies e.g. hyposensitisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a monoclonal anti-hepatitis B antigen binder sequence from the R26 library which may be used in the conjugate of the 'invention. The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest. The surrogate is capable of competing effectively with the analyte for a
                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Labelled functional surrogate of an analyte - useful as competitor molecule in affinity assays, esp. for detecting large macromolecules such as ferritin

                                                                                                                                                                                                                                                                                                                                                      diagnostic analytes for detection include cardiac or tumour markers, allergens, hormones related to fertility-pregnancy or analytes associated with infectious disease. In particular, the assays are useful for detecting ferritin, follicle stimulating hormone, human growth hormone, immunoglobulin E, prolactin, parathyroid hormone, human placental lactogen, hepatitis antigens or antibodies against them, human choining gonadotropin, human luteinising hormone, cytomegalovirus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chlamydia, Streptococcus a, rubella, toxoplasma, herpes virus, DK-MB, myoglobin, myosin light chain, troponin, carcinoembryonic antigen, alpha-fetoprotein, prostate-specific antigen and CA125 (a tumour marker).
the analyte present in a sample. Functional surrogates such as this have an immunoreactive group that allows the surrogate to compete effectively and with the analyte for a limiting amount of its affinity receptor. Functional surrogates are able to mimic naturally occurring analytes. They can be labelled for use in standard competitive affinity assays (esp. homogenous immunoassays) for detecting large macromolecules such as polypeptides, polysaccharides, polyuclectides, glycoproteins and lipid-containing macromolecules, as well as small haptens. Typical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Functional surrogate; analyte; affinity receptor; immunoreactive group; mimic; homogenous immunoassay; detection; diagnostic analyte; Chlamydia; cardiac marker; tumour marker; allergen; hormone; fertility; myoglobin; pregnancy; infectious disease; ferritin; myosin light chain; troponin; follicle stimulating hormone; human; growth hormone; immunoglobulin E; prolactin; parathyroid hormone; placental lactogen; hepatitis antigen; antibody; chorionic gonadotropin; luteinising hormone; cytomegalovirus; streptococcus; rubella; toxoplasma; DK-MB; prostate-specific antigen; carcinoembryonic antigen; alpha-fetoprotein; herpes virus; CA125.

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting
                                                                                                                                                    transmembrane domains of a reporter integrin (RI) fused to the cytoplasmic domain of a target integrin (TI). The RI is pref. from alphanic domain of a target integrin (TI). The RI is pref. from alphal-beta3 and the TI is pref. chosen from alphaV-beta3, alphan-beta2, alpha1-beta1, alpha5-beta1, alpha5-beta1, alpha6-beta1, alpha6-beta1, alpha1-beta3 or alpha4-beta1. This sequence is the cytoplasmic domain of alpha-2. The chimeric integrins are useful for identifying TI inhibitors which can be used to treat mammalian cancers, thrombosis or any unwanted immune respone, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide #1171 encoded by breast cell single exon nucleic acid probe.
Chimeric integrin mol. comprising reporter and target integrin domains - for identifying integrin activation inhibitors which are useful for treating or preventing unwanted immune responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  for measuring gene expression in sample derived from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New spatially-addressable set of single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; microarray; single exon probe; gene expression; breast;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                Functional surrogates are able to minimize naturally occurring analytes.
They can be labelled for use in standard competitive affinity assays (esp. homogenous immunoasays) for detecting large macromolecules such as polypeptides, polysaccharides, polynucleotides, glycoproteins and lipid-containing macromolecules, as well as small haptens. Typical diagnostic analytes for detection include cardiac or tumnour markers, with infectious disease. In particular, the assays are useful for detecting ferritin, follicle stimulating hormone, human growth hormone, immunoglobulin E, prolactin, parathyroid hormone, human placental lactogen, hepatitis antigens or antibodies against them, human lactogen, contonic gonadotropin, human luteinising hormone, cytomegalovirus,
                                                                                                                                                                         surrogate is capable of competing effectively with the analyte for a limiting amount of an affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the amount of the analyte present in a sample. Functional surrogates such as this have an immunoreactive group that allows the surrogate to compete effectively and with the analyte for a limiting amount of its affinity receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Chlamydia, Streptococcus a, rubella, toxoplasma, herpes virus, DK-MB, myoglobin, myosin light chain, troponin, carcinoembryonic antigen, alpha-fetoprotein, prostate-specific antigen and CA125 (a tumour marker).
                                                                                   This sequence represents a monoclonal anti-hepatitis B antigen binder sequence from the R26 library which may be used in the conjugate of the invention. The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Integrin; chimeric; extracellular; transmembrane; cytoplasmic; ligand; activation inhibitor; inflammation; autoimmune disease; transplantation; thrombus; cancer.

the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid product in a nivention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.WiPo.int/Pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 15
